

CAUSE & EFFECT---

Often times when dealing with electricity, one wrong step can create a whole range of problems, from slight to very serious. Think about and write 3 "causes" below dealing with procedures we have discussed—things we could do to create negative "effects." Just write 3 causes—we'll come up with possible "effects" as a class.

CAUSE	EFFECT

2.	
3.	

Ok—Test Your Partner—

This time, think in reverse. Make up 3 effects—or things that could happen—without writing anything in the cause boxes.

When you and your partner both have listed 3 effects, trade papers to see if you can each think of the CAUSE your partner was thinking of.
